Allowance of Application # 10/554,389

1. The following communication is in response to applicant's amendment received 31-July-2008. Claims 1-4, 6-12, and 14 are pending in the application. Claims 5 and 13 are canceled.

Reasons for Allowance

2. The following is an Examiner's Statement of Reasons for the indication of allowable subject matter.

2.1 Claims 1-4, 6-12, and 14 are considered allowable, since when reading the claims in light of the specification, as per MPEP § 2111.01, none of the references of record alone or in combination disclose or suggest the combination of limitations specified in independent claims nos. 1 and 4, including: in regard to claim 1,

an operation section configured to perform an operation in accordance with a method of designing an optical system using an evaluation function [defined at p. 7, Ins. 5-10]; an input section which inputs information required for the operation [p. 25, ln. 21]; an output section which outputs an operation result [p. 25, ln. 25]; and a memory section which memorizes the operation result [p. 25, ln. 24], wherein the method of designing an optical system comprises:

setting an initial-value that sets a value of an optical parameter in a design state where a production error has not been taken into consideration [p. 15, Ins. 14-26], generating an evaluation function [p. 15, ln. 27 through p. 16, ln. 1], performing optimization by determining an optimal value of an optical parameter in a production state [p. 16, Ins. 2-6], which is produced by adding a production error to the optical parameter in the design state, by using the evaluation function [p. 16, Ins. 20-24], and renewing a production state by renewing the production error

included in the optimal value of the optical parameter in the production state that has been determined by the performing optimization, to determine a new value of the optical parameter in the production state [p. 16, lns. 7-19].

Dependent claims 2, 3, 6-11, and 14 are deemed allowable as depending either directly or indirectly from independent claims 1 and 4.

2.2 The instant application is directed to a non-obvious improvement over the invention described in USP 6,895,334, issued to Yabe, which discloses optimizing an optical system in a manner that a first optical property approaches a target value on the basis of a first function for optimization in which the target value of the first optical property including at least an aberration is set, automatically adjusting the first function, and re-optimizing the optical system on the basis of the adjusted first function.

2.3 The art of record, either individually or in combination, fails to teach, suggest, or render obvious the specific arrangement of elements in the same combination as now required by the amended claims. In view of the foregoing, the claims of the present application are found to be patentable over the prior art.

Response Guidelines

3. Any comments considered necessary by applicant **MUST** be submitted no later than the payment of the Issue Fee and, to avoid processing delays, should preferably accompany the Issue Fee. Such submissions should clearly be labeled "Comments on Statement of Reasons for Allowance".

3.1 Any response to the Examiner in regard to this allowance should be
